

ISLAM AHMED EL-BIALY

Telecom & Cloud DevOps Engineer

01096975204 | eslamahmed9697@gmail.com | linkedin.com/in/eslam-el-bialy-b6087a365 | Egypt

PROFESSIONAL SUMMARY

Communications and Computers Engineer with hands-on experience in network infrastructure, mobile communications, and transmission systems, plus enterprise Linux administration. Currently expanding into advanced networking, cloud computing, and DevOps to bridge traditional telecom networks with modern cloud-native infrastructure. Skilled in designing enterprise network topologies, configuring secure Linux systems, and simulating carrier-grade network architectures.

TECHNICAL SKILLS

- Mobile & Core Networks: 2G/3G/4G LTE architecture, E-UTRAN (eNodeB), Evolved Packet Core (MME, HSS, PCRF, S-GW, P-GW)
- Transmission & Optical: Fiber splicing & testing, SDH (STM-1, mapping, overhead, protection), DWDM systems, PDH multiplexing
- Networking & Infrastructure: Cisco routing & switching (CCNA curriculum), IPv4/IPv6 addressing, network security fundamentals, Cisco Packet Tracer simulation
- Operating Systems & Cloud DevOps: Linux administration (Red Hat RHEL / RHCSA), Bash scripting, storage management (LVM, VDO), SELinux, firewalls & ACLs, DevOps lifecycle fundamentals

TECHNICAL PROJECTS & LABS

Enterprise Multi-Branch Network Design & Simulation

Cisco Packet Tracer Project

- Designed and simulated a comprehensive network topology for a multi-branch enterprise
- Implemented advanced routing protocols and switching techniques to achieve seamless inter-branch connectivity
- Configured and deployed corporate services including centralized network communication and email server architectures, validating full end-to-end delivery and connectivity

Red Hat Enterprise Linux Administration Labs (RHCSA level)

Hands-on Infrastructure Practice

- Completed the full curriculum of official Red Hat System Administration I (RH124) and II (RH134) practical labs
- Configured core storage and storage management (VDO, LVM), task scheduling, and boot procedure management
- Secured systems using network firewalls, SELinux policies, and advanced access control lists (ACLs)

EDUCATION & TRAINING

Comprehensive Telecom Systems & Transmission Training

July 2026 – Aug 2026

Telecom Egypt (WE)

- Mobile Communication Systems: full architecture of 2G, 3G, and 4G LTE, access networks (E-UTRAN / eNodeB), and Evolved Packet Core elements (MME, HSS, PCRF, S-GW, P-GW)
- Optical Fiber Infrastructure: fiber optics fundamentals, cable preparation, splicing techniques, and optical measurements
- Transmission Networks: PDH multiplexing; SDH principles (STM-1 elements, mapping, pointer, overhead, protection features, testing equipment); DWDM networks (linear & non-linear high-power effects, devices, measurements)

Cisco Certified Network Associate (CCNA 200-301)

In Progress

Digital Egypt Pioneers Initiative (DEPI) — Online

- Comprehensive training on routing and switching protocols, IPv4/IPv6 addressing, network security fundamentals, and automation concepts

Linux System Administration

Completed

Senior Steps Academy

- Foundational to advanced enterprise Linux environments, shell scripting, user management, permissions, and network services security
